

Enhance your teacher training

Now is a great time to enhance your skill set and develop your confidence across the curriculum. With more children in schools learning about programming and information technology, the subject is playing a more important role than ever before.

With the widespread school closures creating new challenges for teachers, the National Centre for Computing Education is offering free remote training in computer science over the coming months, supported by facilitator-led Q&As. We are pleased to announce that these courses are now open to all subject trainee teachers.

Register today at: teachcomputing.org

The benefits to Computer Science trainee teachers

We provide..

- Free online and remotely delivered professional development courses
- Expert guidance to allow you to apply what you have already learnt and develop your subject knowledge
- Flexible training, with a wide range of short modules you can fit around other commitments
- Guidance from Computer Science Champions throughout the programme
- Bursary of £920 for successfully completing the programme, to be paid to your school/college once you gain employment (English state-funded education only)

The benefits to trainee teachers of other subjects

We provide...

- Opportunity to gain a second specialism and enhance your capacity
- Develop digital transferable life skills, for use at home and in the classroom
- Free online professional development courses, available online and via remote delivery
- Learning pathways to support you through the programme and gain a broad look at different elements of computing
- Flexible modules delivered in short sessions to fit around commitments
- Expert guidance to enhance your subject knowledge

- Guidance from Computer Science Champions throughout the programme
- Bursary of £920 for successfully completing the programme, to be paid to your school/college once you gain employment (English state-funded education only)

...Whichever route you take, you'll be able to plan and deliver exciting lessons that enable you to develop young people's understanding of all areas of the computer science curriculum.
